Roll No : 225229104

Name : Asha Belcilda P

Lab_4 : Document Similarity using Doc2vec

Exercise-1

1.Import dependencies

In [*]:

```
import gensim
```

In [*]:

```
from gensim.models.doc2vec import Doc2Vec, TaggedDocument
from nltk.tokenize import word_tokenize
from sklearn import utils
```

2. create dataset

In [*]:

```
data=["I love machine learning. Its awesome.",
"I love coding in python",
"I love building chatbots",
"they chat amagingly well"]
```

3.Create TaggedDocument

In [*]:

```
tagged_data=[TaggedDocument(words=word_tokenize(d.lower()),tags=[str(i)]) for i,d in enumerate(data)]
```

4.Train Model

In [*]:

```
#model parameters
vec_size=20
alpha=0.025

#create model
model=Doc2Vec(vector_size=vec_size,
              alpha=alpha,
              min_alpha=0.00025,
              min_count=1,
              dm=1)

#build vocabulary
model.build_vocab(tagged_data)

#shuffle data
tagged_data=utils.shuffle(tagged_data)

#train Doc2Vec model
model.train(tagged_data,
        total_examples=model.corpus_count,
        epochs=30)

model.save("d2v.model")
print("Model Saved")
```

5.Find Similar documents for the given document

In [*]:

```
from gensim.models.doc2vec import Doc2Vec

model=Doc2Vec.load("d2v.model")

#to find the vector of a document which is not in training data

test_data=word_tokenize("I love chatbots".lower())
v1=model.infer_vector(test_data)
print("v1_infer",v1)

#to find most similar doc using tags
similar_doc=model.dv.most_similar('1')
print(similar_doc)

#to find vector of doc in training data using tags or
#In other words,printing the vector of document at index 1 in training data

print(model.dv["1"])
```

Exercise-2

Question-1. Train the following documents using Doc2Vec model

In [*]:

```
docs = ["the house had a tiny little mouse",
        "the mouse ran away from the house",
        "the cat finally ate the mouse",
        "the end of the mouse story"]
```

In [*]:

```
tagged_docs=[TaggedDocument(words=word_tokenize(d.lower()),tags=[str(i)]) for i,d  in enumerate(data)]
```

In [*]:

```
#model parameters
vec_size=20
alpha=0.025

#create model
model=Doc2Vec(vector_size=vec_size,
              alpha=alpha,
              min_alpha=0.00025,
              min_count=1,
              dm=1)

#build vocabulary
model.build_vocab(tagged_docs)

#shuffle data
tagged_docs=utils.shuffle(tagged_docs)

#train Doc2Vec model
model.train(tagged_docs,
            total_examples=model.corpus_count,
            epochs=30)

model.save("d2v.model")
print("Model Saved")
```

In [12]:

```
from gensim.models.doc2vec import Doc2Vec

model=Doc2Vec.load("d2v.model")

#to find the vector of a document which is not in training data
test_data=word_tokenize("cat stayed in the house".lower())
v1=model.infer_vector(test_data)
print("v1_infer",v1)

#to find most similar doc using tags
similar_doc=model.dv.most_similar('2')
print(similar_doc)

#to find vector of doc in training data using tags
print(model.dv["2"])
```
